

In the client folder, remember to check the node and npm version before use since the source code doesn't include node\_modules.

node --version

npm -version

also, don't forget to import axios

npm i --save axios

and this one is so important : npm install react-router-dom

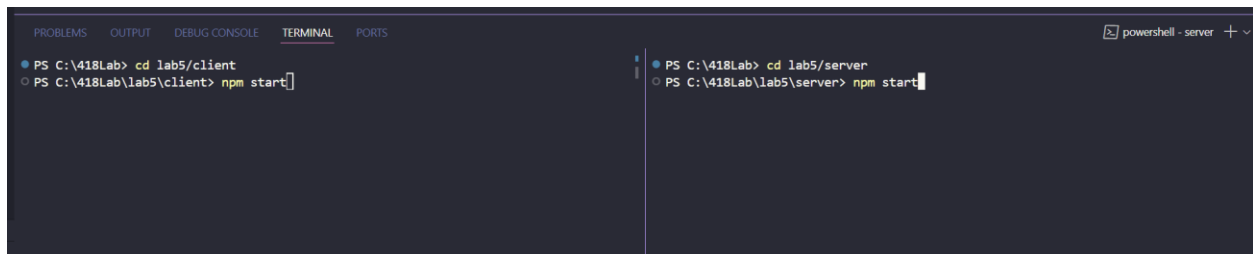

don't forget the: npm i --save react-select

In the server folder, remember to install the dependencies.

npm i --save express mongoose nodemon dotenv cors

Firstly, we need to have two terminals and change directory to client and server.

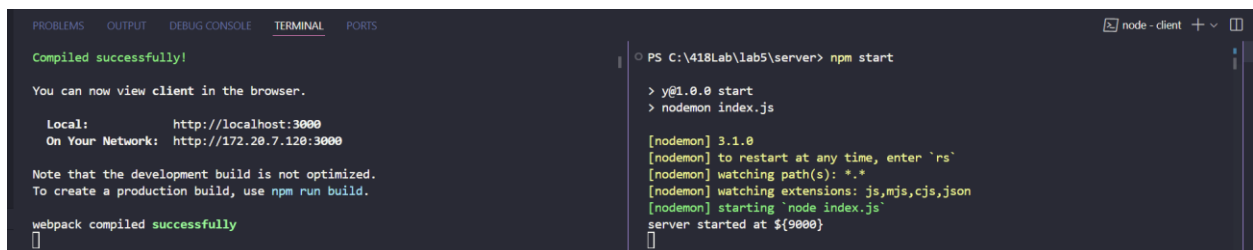

secondly, we need to use npm start for these two different directories, one's Reactjs, another one connected to MongoDB database.

```
PS C:\418Lab> cd lab5/client
PS C:\418Lab\lab5\client> npm start

PS C:\418Lab> cd lab5/server
PS C:\418Lab\lab5\server> npm start
```

When you see this, it means that we successfully started the project.

```
Compiled successfully!
You can now view client in the browser.
Local: http://localhost:3000
On Your Network: http://172.28.7.128:3000
Note that the development build is not optimized.
To create a production build, use npm run build.
webpack compiled successfully

PS C:\418Lab\lab5\server> npm start
> y@1.0.0 start
> nodemon index.js
[nodemon] 3.1.0
[nodemon] to restart at any time, enter `rs`
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting 'node index.js'
server started at ${9000}
```

System Status: All Good

We need to log in first since almost all the components in lab5 based on home page.

Let's type username:5 and password: 5 then click log in.

username

password

.

Log in

[sign up here!](#)

[manage project here!](#)

[create team here!](#)

[create team roster here!](#)

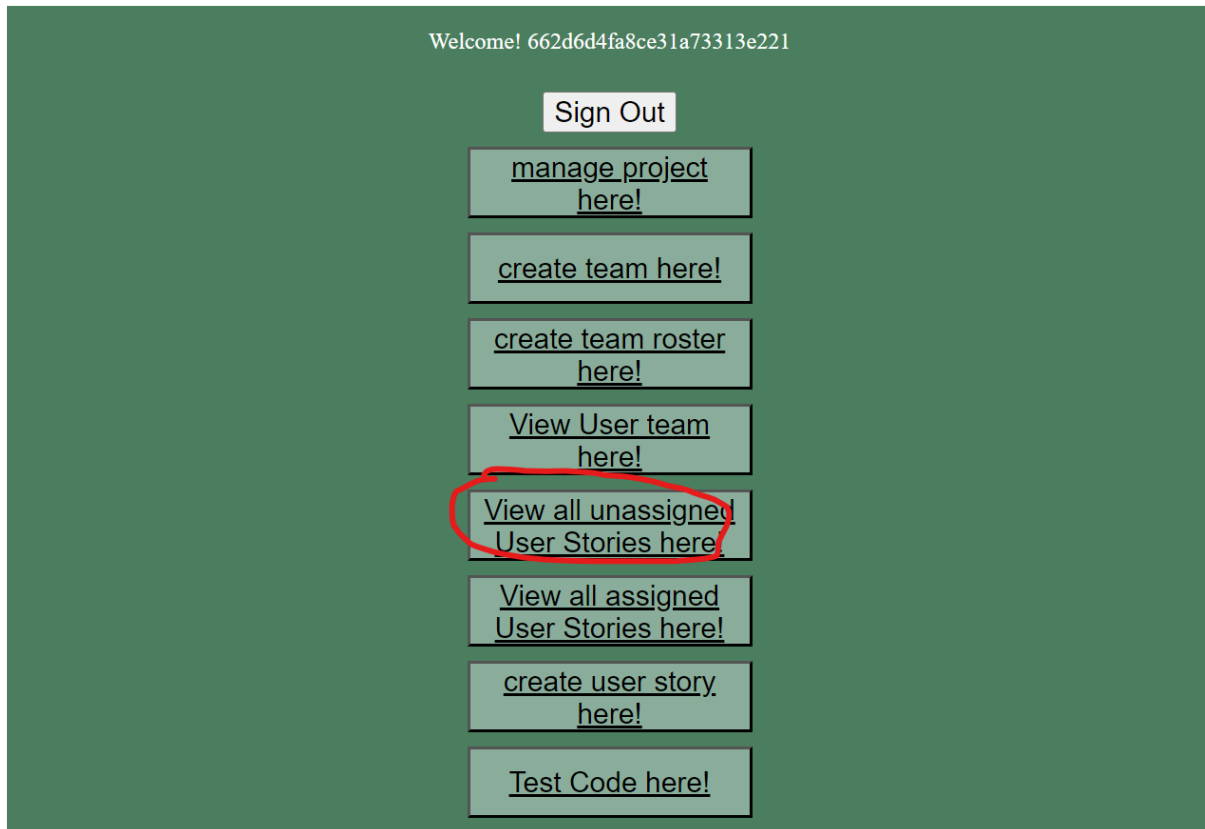

[View team here!](#)

[View Project here!](#)

[create user story here!](#)

[Test Code here!](#)

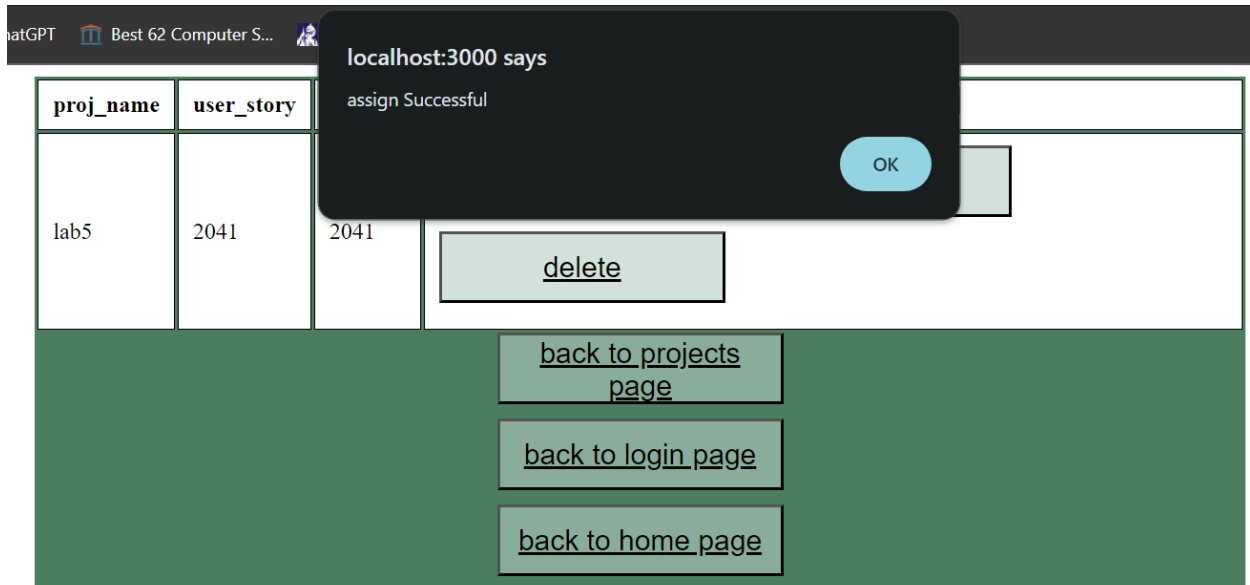

We can see home page right now, and let's click 'unassigned user stories here!'

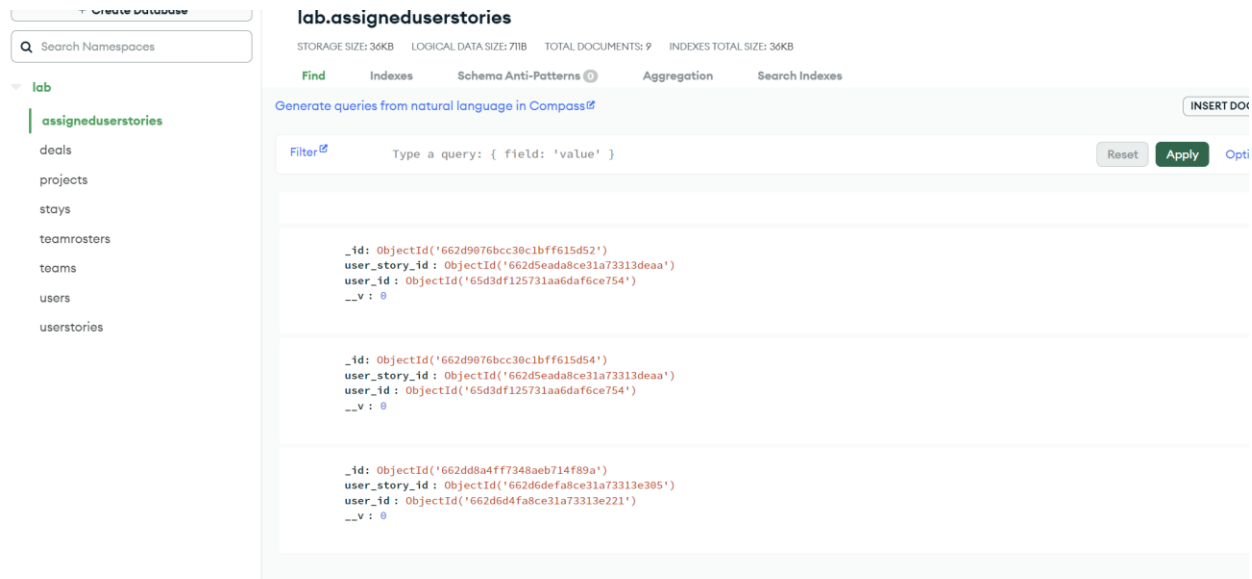

I already add some user stories here so we can see: then click 'assign'.

proj_name	user_story	priority	option	
lab5	2041	2041	<a href="#">assign</a>	<a href="#">edit</a>
			<a href="#">delete</a>	
			<a href="#">back to projects page</a>	
			<a href="#">back to login page</a>	
			<a href="#">back to home page</a>	

Then we can see this:

Let's check our database, remember to refresh it:

Ok, we can see our data here, then click “back to home page”, then click ‘view assigned userstories’

Welcome! 662d6d4fa8ce31a73313e221

Sign Out

[manage project here!](#)

[create team here!](#)

[create team roster here!](#)

[View User team here!](#)

[View all unassigned User Stories here!](#)

[View all assigned User Stories here!](#)

[create user story here!](#)

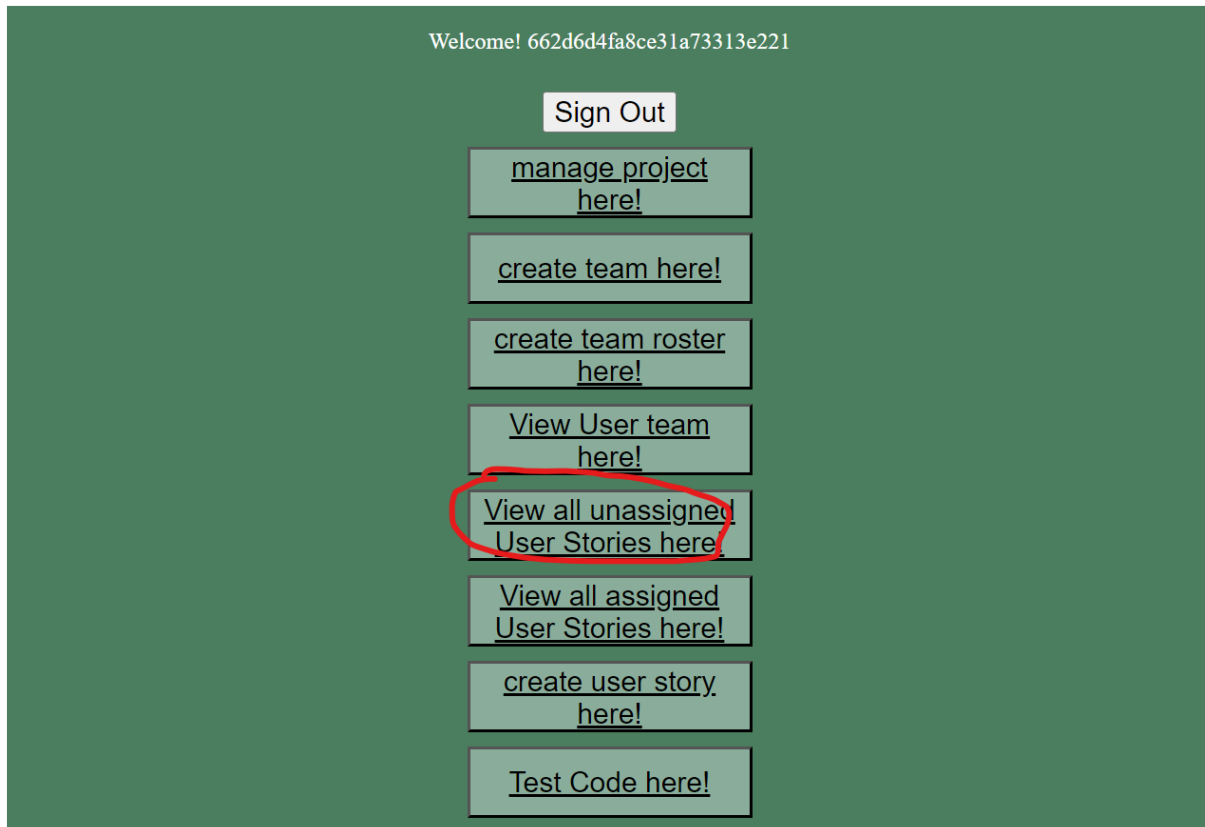

[Test Code here!](#)

We can see our assigned user story here, but it cant be edit or delete since it is assigned. We can delete and edit it in unassigned page.

proj_name	user_story	priority
lab5	2041	2041

[back to home page](#)

Click back to home page, click ‘unassigned user stories here!’ again

When you see this page: click ‘edit’

proj_name	user_story	priority	option	
lab5	2041	2041	<a href="#">assign</a>	<a href="#">edit</a>
			<a href="#">delete</a>	
			<a href="#">back to projects page</a>	
			<a href="#">back to login page</a>	
			<a href="#">back to home page</a>	

We can see this page, and make your edit the click ‘edit user story’ if you see error in edit, make sure you type in number rather than other type in priority

project\_id cant be edited, if you want to set a new userstory associate to another project,create a new one!

Project Id  
UserStory

lab5readme

Priority

123

Edit User Story

[back to login page](#)

[back to home page](#)

localhost:3000 says  
edit Successful

OK

project\_id cant be edited, if you want to set a new userstory associate to another project,create a new one!

lab5readme

Priority

123

Edit User Story

[back to login page](#)

[back to home page](#)

And also in database:

```
_id: ObjectId('662d6defa8ce31a73313e305')  
proj_id: ObjectId('662d6dada8ce31a73313e28c')  
user_story: "lab5readme"  
priority: 123  
__v: 0
```

Then click ‘delete’:

being cleared, we need to log in again.

```
const handleEditStories = (event) => {  
  event.preventDefault()  
  axios.put(`http://localhost:9000/edituserstories/${userstory_id}`, { user_story, priority })  
  .then((res) => {  
    if (res.data) {  
      alert('edit Successful')  
      localStorage.clear();  
      localStorage.setItem('editeditem', res.data.proj_id);  
      navigate(`/userstories/${res.data.proj_id}`);  
    }  
  })  
}
```

You can click “back to home page” or “back to login page”, here’s how it goes for click “back to home page”, for log in type in username:5 password:5 then click log in

username  
User ID

password

[sign up here!](#)

[manage project here!](#)

[create team here!](#)

[create team roster here!](#)

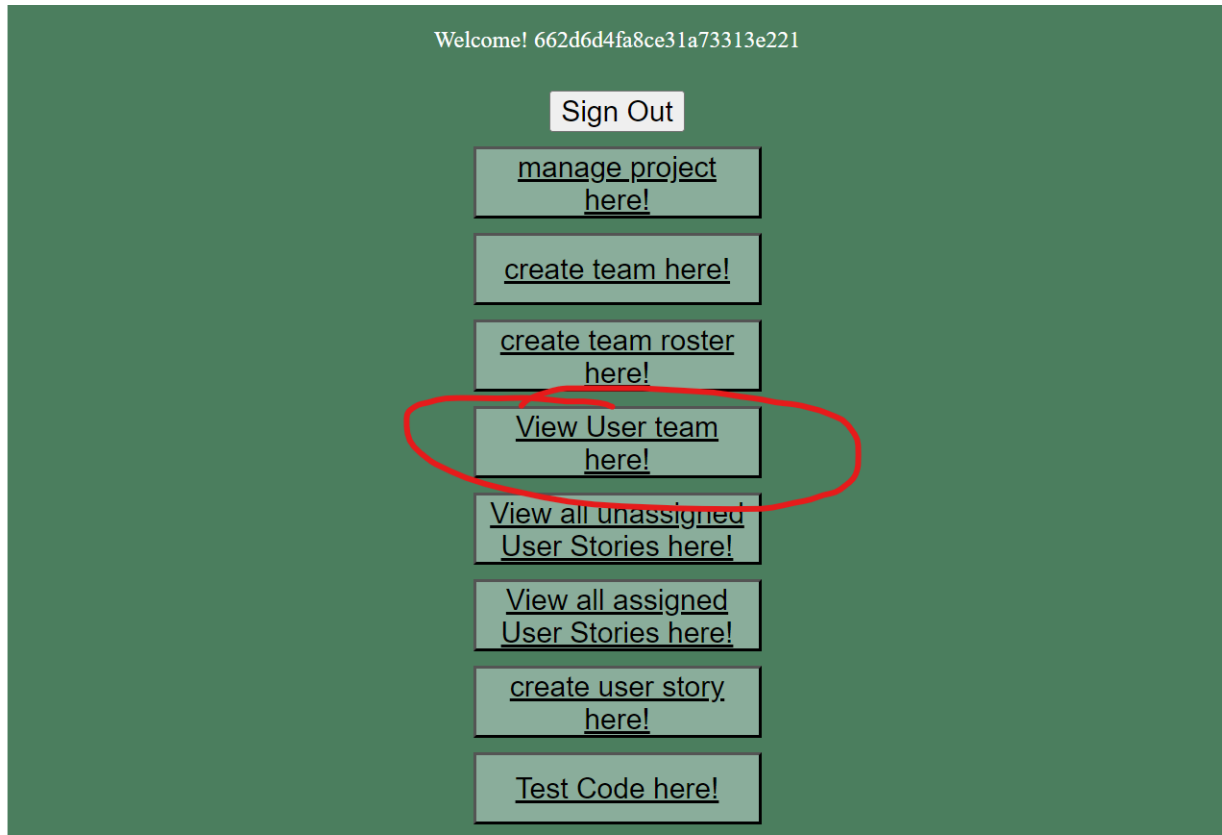

[View team here!](#)

[View Project here!](#)

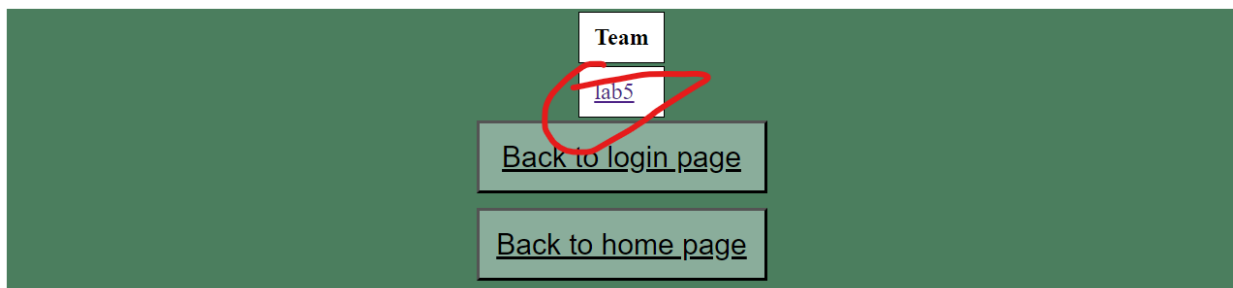

[create user story here!](#)

[Test Code here!](#)

Then lets cilck” view user teams here”!

We can see this. Then click “lab5”

Then we can see: then click "team projects here" to see the projects associated with team

<b>Team Name</b>
lab5
<b>Members</b>
lab5 test1
lab6 test1
<a href="#">back to Team page</a>
<a href="#">team projects is here</a>
<a href="#">back to login page</a>
<a href="#">back to home page</a>

Here is the team project, if we click “lab5”, we can see the user stories associated with project.

Project Name	Project description	Product Owner Name	Project Manager Name	Team Name
<a href="#">lab5</a>	project	lab5	lab5	lab5
<a href="#">back to login page</a>				
<a href="#">back to home page</a>				

We’ve deleted at the start of this readme, so now is empty. Click back to home page now.

proj_name	user_story	priority	option
<a href="#">back to projects page</a>			
<a href="#">back to login page</a>			
<a href="#">back to home page</a>			

That’s all about lab5, if it cannot execute correctly, please check package.json in client and server to install what you need.
